

How to Order a FileEngine

Unlike other servers that require you to pick and choose among dozens of options to configure a server, FileEngine is simple. FileEngine is bundled with all the hardware, software and services that most small businesses require. All you do is pick the size that suits your data storage needs.

Data Capacity =====	Model =====	Monthly Cost =====
25GB	FE1025	\$235/mo
100GB	FE1100	\$299/mo
200GB	FE5200	\$349/mo

Everything is included: FileEngine, UPS, backup media, standard installation, 14 day archive partition, dedicated restore and TakeOut partitions, server Recycle Bin, monitoring, maintenance, disaster recovery – everything.

Here are the steps to get your FileEngine:

1. Fill out the credit application for the model you want: [FE1025](#), [FE1100](#) or [FE5200](#) and fax it to our finance partner: [Dolphin Capital](#). We'll contact you with your approval status by the next business day.
2. Complete the FileEngine [Customer Service Agreement](#) and fax it to us.
3. Use our On-Line [FileEngine Configuration](#) system to tell us about your network, users and data storage needs. This system allows you to configure FileEngine's network, create user accounts, create groups that share permissions to access directories of information (and put users into those groups,) and create File Storage Areas (FSAs) where your files will be stored. We'll be happy to walk you through this step – or – you can ask your local IT consultant to do this for you.
4. Your FileEngine will be shipped to your office (pre-paid) and installed on your network. Data stored on your PCs will be moved to FileEngine, shortcuts that refer to data will be modified (if possible) to point to FileEngine and data pointers in programs will be adjusted to store information on FileEngine too. Depending on your PC operating system, your PCs will be 'joined' to the FileEngine hosted Domain and the local profiles migrated to 'Domain profiles.
5. Sign Dolphin's Rental Agreement and fax it to them. Usually by the next business day, a representative of Dolphin will call your office to assure that the installation was satisfactory and the FileEngine is working for you.

That's it!

No other file server designed for small businesses packs as much value into such a simple system. That's why FileEngine is the "No Worries" server!
